

Side Bend LED Flexible Neon

Features

Suitable for indoor and outdoor lighting with a IP65 Rating
Linear flexible LED neon light without visible dots
Integral silicone extrusion molding, bendable and flexible to fit irregular shaped spaces, like slope spaces
Corrosion resistant, flame retardant, anti-UV yellowing and UL, CE, FCC, RoHS certified

Parameters

Basic Parameters		Part Number	Color	Power	Lumens	Roll Length
LED Type:	SMD 2835	Z-NC-S-27K*	2,700K	3W / ft.	89lm / ft.	33 ft.
Input Voltage:	24 VDC	Z-NC-S-30K	3,000K	3W / ft.	89lm / ft.	33 ft.
White CCT CRI:	>90	Z-NC-S-35K*	3,500K	3W / ft.	89lm / ft.	33 ft.
Beam Angle:	270°	Z-NC-S-40K*	4,000K	3W / ft.	89lm / ft.	33 ft.
Protection Rate:	IP65	Z-NC-S-50K*	5,000K	3W / ft.	89lm / ft.	33 ft.
Safety Rating:	CE, FCC, RoHS, UL	Z-NC-S-65K	6,500K	3W / ft.	89lm / ft.	33 ft.
Warranty:	3 Years	Z-NC-S-R	Red	3W / ft.	N/A	33 ft.
		Z-NC-S-G	Green	3W / ft.	N/A	33 ft.
		Z-NC-S-B	Blue	3W / ft.	N/A	33 ft.
		Z-NC-S-O	Orange	3W / ft.	N/A	33 ft.
		Z-NC-S-P	Pink	3W / ft.	N/A	33 ft.
		Z-NC-S-Y*	Yellow	3W / ft.	N/A	33 ft.
		Z-NC-S-RGB*	RGB Color Changing	4W / ft.	N/A	16.4 ft.
		Z-NC-S-RGBIC*	RGBIC Color Chasing	4.5W / ft.	N/A	13.2 ft.

*4-8 Week Lead Time

Bending Directions

Warnings

No bending up and down

No twisting and bending

Repeated bending is prohibited

No 90° or sharp angle bends

Side Bend LED Flexible Neon

Installation & Disassembly in Track

Installation of light strip from both ends

Prohibit installation from one direction

When the length of the light strip exceeds 6.56 ft., it is recommended that two people install it

Use tools to carefully and slowly pry during disassembly

Prohibition of direct violent pulling

When the length of the light strip exceeds 6.56 ft. it is recommended that two people disassemble it

Cutting, Soldering, & Plug Installation

1. Cut the strip to the desired size

⚠ The minimum cutting unit is based on the marked cutting line of the strip

2. Connect the wire to the light strip (note the direction of positive and negative polarity)

3. Insert the plug with a hole into the cable, and inject glue into the plug

⚠ The amount of glue is 1/3 to 1/2 of the plug

5. Push the plug into the light strip

⚠ When the plug is pushed into the light strip, pay attention to the decorative plug and the tail of the light strip in a vertical state, so as to avoid glue entering the inside of the light strip

6. Apply filler around the tail of the light strip, and then push the plug into the tail of the light strip

⚠ After the injection of glue need to be left flat for 2 hours to wait for the surface drying can be carried out after the project work, 24 hours completely dry

Installation Precautions

- Please install according to national standards and local electrical specifications.
- This product must be installed and maintained by a qualified electrician or other professional.
- Before installation, please check whether the product parameters are consistent with the requirements (see the Product Manual or label for product parameters).
- The power supply voltage must be consistent with the required voltage of this product.
- Ensure that the wattage of a single power supply is more than 20% of the load wattage of the power supply.
- The whole installation process is strictly prohibited to operate with electricity.
- All positive and negative terminals must be correctly matched during the wiring process.
- If terminals are used, it is appropriate that they cannot be pulled out with bare hands after connection.
- All connection points must be effectively insulated, waterproof and anti-corrosion treatment.
